CHURCH PRESENTS BIBLICAL PAGEANT

From David's Advice to Solomon
to Christ's Birth Is
Depicted.

That part of the Bible from the time of David's charge to his son Solomon to the birth of Jesus in Bethlehem, was enacted by members of the Mount Vernon Place Methodist Episcopal Church South congregation in the auditorium last night, under the title of "The Christ of Prophecy."

The pageant was declared by many who knew nothing of its preparation to have exceeded their expectations by far and to have been the most elaborate ever given by a single congregation in Washington. The pageant was written by R. E. Mitchell and the music was under the direction of R. Dean Shupe. Mrs. Frost was the accompanist at the organ.

Lines From Scriptures.

The outstanding feature of the production was that all the members of the cast lived the characters in the Bible which they represented. Their lines were taken verbatim from the Scriptures. The only exception to this was the case of the Three Wise Men, whose lines were taken from "Ben Hur."

The story of the pageant followed: After receiving instructions from his father, David, Solomon dedicated the temple; the degradation of the children of Israel, who began to worship Baal, and the bitter rebukes of their sins by Isaiah and the Prophet Jeremiah followed; Jeremiah also foretold of their captivity by King Nebuchadnezzar, the actual fulfillment of which was not shown. The next scene showed the king in Babylon, listening to the interpretation of his dreams by Daniel. As the people reach their lowest state of hope, Isaiah foretells their release. The prophecy is fulfilled and the pageant closes with the birth of Christ in Bethlehem.

Cast Numbered 150.

The cast numbered about 150 and included the following characters: Isaiah, J. W. Rodkey; Jeremiah, C. P. Clark; King David, E. E. Overholt; King Solomon, W. W. Millan; King Zedekiah, J. D. Linkins; King Nebuchadnezzar, M. G. Eley; Arioch, captain of the guard, R. W. Caylor; first magician, J. H. Heavener; Daniel, B. J. Laws; three wise men, Gaspar, L. Stanley, Melchior, D. Switzer; Bathsheba, W. I. Smalley; King Herod, M. E. Palmer; priestly counselor, A. E. Burger; angel of the annunciation to the shepherds, Mrs. B. S. Embury; Joseph, I. L. McCaffrey; Mary, Miss Alice Buxton; soldiers, shepherds, counselors, magicians and sorcerers, members of the adult Bible class; angels, members of the intermediate, junior and primary departments of the Sunday school.

Lighting will be under the direction of W. S. Warren; costumes and properties, Mrs. T. A. Groover; costumes, Miss Fay Moorman; and construction, T. D. Gannaway.

VENIZELLOS IN ROW WITH TURK ENVOY

(Continued from First Page.)

"stationnaires"—that is, ships attached to the foreign embassies and used for conveyance purposes. They say that these vessels have grown from launches to 30,000-ton cruisers, with guns trained on Constantinople. One of the Turkish delegates told the writer that "using cruisers for tax launches is like inland diplomats using tanks for taxicabs." The allies told the Turks that they thought the question of stationnaires could be arranged. They also agreed to the demand of the Turks to have garrisons at Angolukavak and Banderna. The Turks wanted a garrison of five thousand troops and artillery on the Gallipoli peninsula.

Guarantees More Difficult.

The question of guarantees is more difficult. The Turks want full guarantees, preferably from some maritime power like Great Britain or the United States. Great Britain seems ready to furnish guarantees, but Italy fears complications in case of war and does not wish to be obliged to defend the straits.

The Turks seem pleased at the turn of events, for they do not want to fight Russia's battles by closing the straits. Thus the control of the straits gradually is taking shape in accordance with the principles originally suggested by the Allies. Looking to a free waterway. With an international board having no jurisdiction in the demilitarized zone, the power of group of powers will have an opportunity to militarize the straits for the purpose of forcing their own commerce or naval movements.

POWER OF "DYNAMO" IN HEAVENS" DISCOVERED BY NEW INSTRUMENT

(Continued from First Page.)

This change in the compass has given rise to recent inflated stories about the magnetic north pole moving, scientists believe. The pole is still about where it was, but that this great electrical influence in the heavens is pulling the compass away from its true direction. The closest we can now come to true bearings, they say, is by the stars. But since astronomers declare the stars, too, are moving, the necessity for discovering some means of "making the compass behave" may be understood.

High Hopes Held.

Dr. S. J. Mauchly and H. W. Visk of the department of terrestrial magnetism of the Carnegie Institution of Washington are contributing much toward that work. Just how much Dr. Mauchly's electrical measuring instrument will assist him, that expert is not prepared to say, but he hopes for big things from it.

"Many investigations have shown," he said, "that the knowledge of the electrical state of the air is required for a proper study of the changes which are constantly taking place in the earth's magnetism. No requests for data regarding the electrical state of the air come with increasing frequency from investigators in aeronautics, and radio communication, and even from certain branches of the medical science."

Description of Instrument.

"One of our instruments was used by the MacMillan expedition in Baffinland last winter for securing a continuous photographic record of the differences in electrical potential between the air and the earth's surface. The apparatus consists essentially of three parts: a 'collector,' electrometer and a recording apparatus."

The collector is a small metal disc mounted on an insulated support several feet outside the building. The disc is coated with ionium, which causes it to take on the potential of the air as soon as it is exposed. An ordinary thermometer takes on the temperature of the air.

Light Reflected.

A beam of light is reflected from a small mirror attached to the movable system of the electrometer and is focused upon a sheet of photographic paper secured to a recording drum which turns on its axis once in twenty-four hours. Each change in

the potential of the air surrounding the collector causes a slight shifting of the mirror and a corresponding displacement of the point at which the reflected beam falls upon the photographic paper.

The records show that the potential of the air is subject to many small and irregular changes which are, however, superimposed upon large and more regular daily variations, which themselves may be grouped into several classes representative of the different parts of the year.

It is a serious offense to ride a bicycle anywhere near the city of Constantinople.

CHANGE IS SOUGHT IN BRIDGE APPROACH

Request Regarding New Georgetown Structure Made by Board of Trade.

Request to change the proposed approach to the new Georgetown bridge has been laid before the Commissioners by Edward M. Tyler, chairman of a subcommittee of the Washington Board of Trade.

ple turn in the roadway from M street to the bridge. The Board of Trade subcommittee urges the city heads to adopt one of the alternate plans providing for a small island of safety or parking at the Washington end of the bridge that would separate east and west bound traffic going to and from the structure.

Mr. P. S. Benson, assistant engineer commissioner, explained today that the scheme decided upon is not only the most economical, but is one which could later be changed without difficulty. He expressed the belief that the plan to be carried out will give a roadway at the entrance to the bridge of ample width to carry all of the traffic that will pass that point.

Mr. Tyler's petition points out that Thomas Circle is a striking example of the advantages of a center parking space at locations where traffic converges from many directions.

RIO FLIGHT CONTINUED.

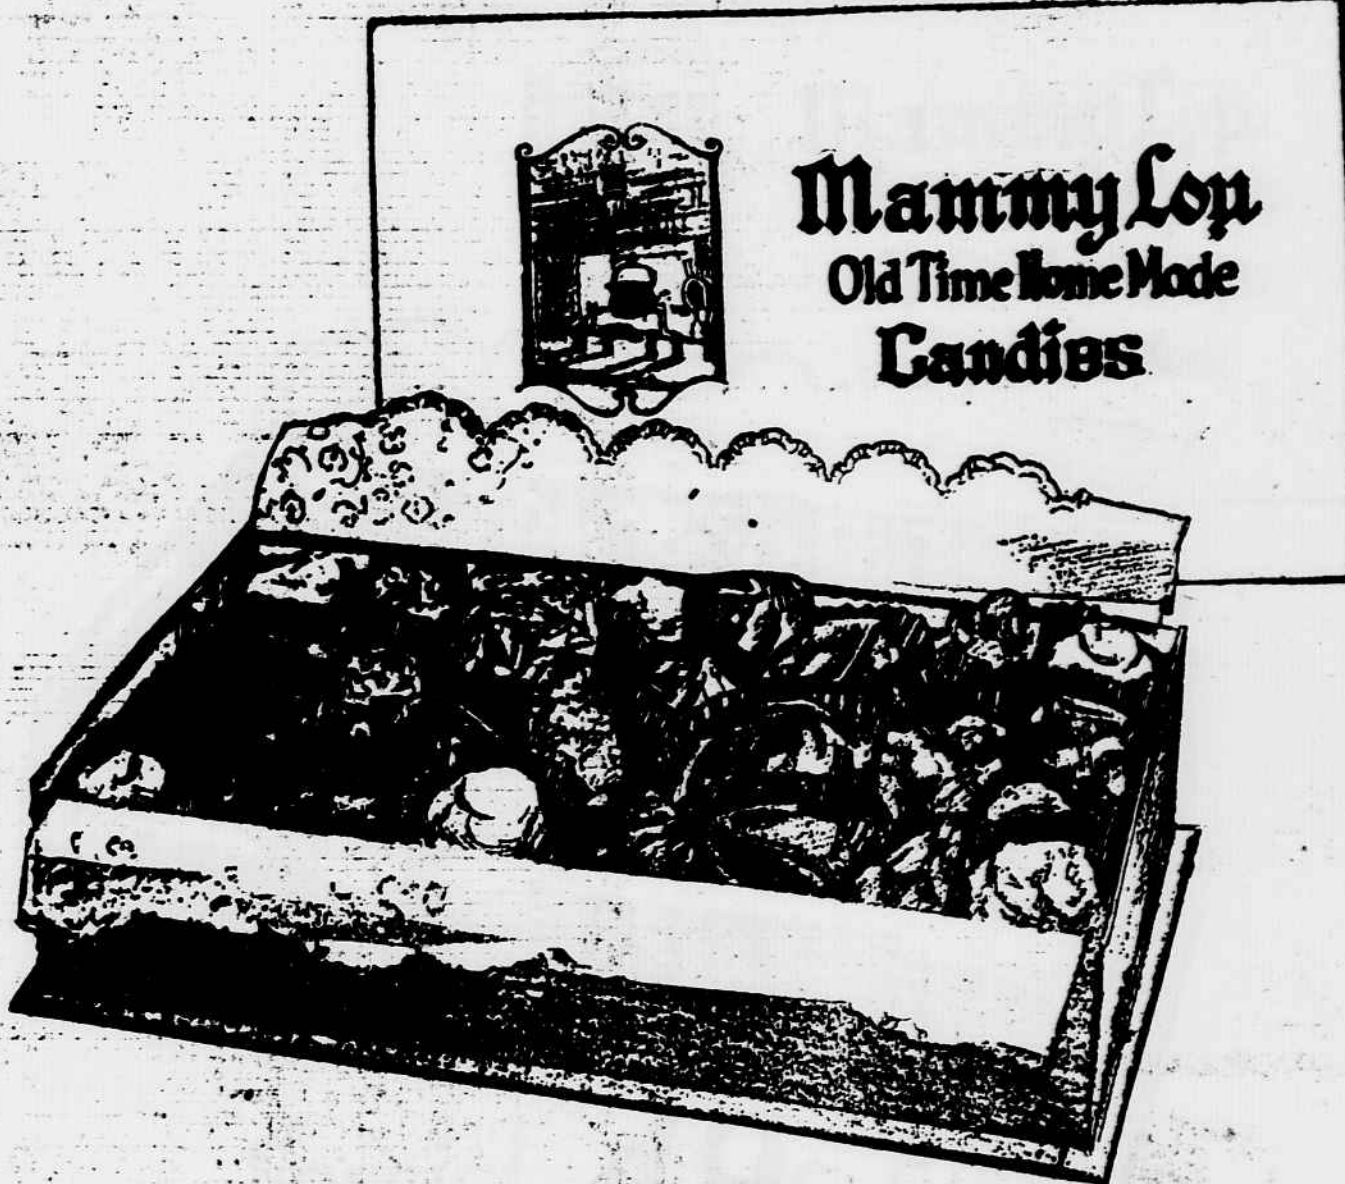

Lieut. Hinton and Companions

Arrive at Natal.

By the Associated Press. NATAL, Brazil, December 21.—The seaplane Sampaio Correia II, in which Lieut. Walter Hinton and his companions are attempting a flight from New York to Rio Janeiro, arrived here at 12:50 p.m. from Aracaty.

Mammy Lou

Old Time Home Made Candies

Special 49c Pound

Wonderful old-time homemade "Mammy Lou." The candy that's made fresh every single day and comes to our stores in a sumptuous assortment of—rich milk chocolates with varied centers—delectable nut, fruit and cream centered bon bons—dark chocolates—bittersweet chocolates—fudge and other delightful specialties.

Clovers packed in an attractive box, "Mammy Lou" makes the ideal gift of candy, always appreciated by the recipient—and just remember this—if you paid \$10.00 a pound you couldn't buy better or purer quality—

1-lb. box, 25c; 1-lb. box, 49c; 2-lb. box, 95c; 5-lb. box, \$2.25

Deliciously Fresh---Pure Sugar---Christmas

Hard Candy - - - 15c lb.

Just the pure, attractive, delicious Hard Christmas Candy that Mother and Daddy like as much as the kiddies—and 15c a pound, only because our alert candy buyer bought a whole carload, when the price was shaved down to the lowest possible figure. We don't believe you can buy the same quality elsewhere for less than 20% more. IT'S GOING FAST THOUGH—DON'T DELAY PURCHASING.

Pure "Sun Ray" Filled Christmas Candy

Special 19c Pound

Sun Ray Brand Hard Christmas Candy—consists mainly of filled pieces—it is an excellent assortment and the price, we promise you, is very, very low.
